

MODERN DELIVERY ECOSYSTEM

MODERN EXPO

ABOUT

Modern Expo has been a top company in creation of modern retail for more than 20 years.

We are convinced that modern retail is a phenomenon encompassing a multilevel system of obtaining goods with the ultimate consumer. Today, it's not just the physical store space, but also the solutions for E-commerce, warehouses, logistics and integrated supply chain.

Modern Expo is 9 high-tech production units specializing in different types of equipment. Our manufacture is one of the most powerful in the world, we provide mass replication in roll-outs and ensure meeting each of our products with European safety and quality standards (EN and FEM).

Today we have become a platform bringing together leading professionals into powerful teams of R&D, IT, retail design, engineering, etc., working in synergy to create the perfect retail of the future by Modern Expo.

APPROACHES

SUSTAINABILITY

Principles of sustainability affect every global industry, producing qualitative changes in environmental activity. Logistics is no exception. In particular, the last-mile delivery, which traditionally requires a great deal of energy and time, encourages retailers and logistics companies to look for new eco-solutions to manage the operations wisely. To reduce the negative impact on the environment, companies use many modern technologies and up-to-date services, one of which is processes improvement via parcel terminals network.

URBAN INTEGRATION

The image shows a modern urban courtyard. In the center is a large, modular locker unit with a grid of white and grey panels. A central panel has a small yellow screen. To the right of the locker unit is a long, low white bench with a wooden top. Behind the bench is a large planter box with various plants. The courtyard is paved with grey stone tiles. In the background, there are modern buildings with wood and white facades, and a large tree with orange leaves. The sky is blue with some clouds.

The unique set of accessories allows not just to build a network of post offices, but to arrange real public spaces. A range of street furniture elements makes the parcel locker an integral element of city architecture.

KAIZEN PHILOSOPHY

A modern, multi-story building with a courtyard. In the foreground, there is a large tree with vibrant pink blossoms. To the left of the tree, a white parcel locker with a yellow display screen stands on a paved area. A wooden bench is positioned in front of the locker. The building in the background has multiple floors with balconies and large windows. The scene is set during the day with soft lighting.

Our unique constructive solutions allow combining neutral, cooling, and freezing cells into a single parcel locker. Therefore, it creates a possibility of delivering different types of products into one location.

ALL-IN-ONE

AUTONOMY

We designed autonomous solutions that allow independence from the grid. This in turn provides more opportunities to install terminals where connection to the network is not possible.

NETWORK

We provide our customers with integrated solutions for effortless parcel lockers network creation. First of all, we can perform orders of any scale as our facilities allow producing over 1 000 000 cells per year. Secondly, we develop software for managing the entire parcel lockers network in real-time and are experienced in adapting the machines to our clients' software.

A modern architectural rendering of a building courtyard. The building features a mix of dark grey, light grey, and wood-grain facades. A central entrance is visible. The courtyard has a paved ground with some planters and a long white structure on the right side that houses parcel terminals. A large yellow number '24/7/365' is overlaid in the top left corner.

24/7/365

At any time round the clock, in
any weather, and at all seasons
— our parcel terminals provide
service of the highest quality
24/7/365

SEAMLESS

We develop software for parcel lockers as well as create instrument sets for a logistics operator, that allow managing the entire lockers network in real-time. Namely, tracking the status of each parcel, monitoring the number of busy and free cells, and receiving all important information about the machine.

Moreover, we create applications for couriers and ultimate consumers, that ensure maximum parcels delivery speed and provide a seamless customer experience while using parcel locker.

NEW FUNCTIONS

Cooling and freezing cells, sanitizer, vending, unpacking table are special modules that offer new opportunities to provide the best service.

We are constantly working to reduce the carbon footprint and make our products less energy-consuming.

Our solutions are technological and reliable, so you will not spend extra time and energy to maintain their viability.

We already offer products that work without a network connection, but using natural renewable resources.

ENERGY EFFICIENCY

INCLUSIVENESS

The vertical screen is easy to control from any position. This means that even people with inclusive needs can easily reach the top of it. Whereas, user application provides the selection of only lower cells for receiving the parcel.

PRODUCTION CAPACITY

- 1 000 000 cells per year
- 112,000 m² production facilities
- 9 production units
- own ISO certified laboratory
- worldwide supplies
- roll-outs

SECURITY

A security camera is mounted on a dark, textured wall above a teal-colored metal gate. The gate has a grid-like pattern. In the foreground, there are some tall, thin grasses. The word "SECURITY" is written in large, bold, yellow letters at the top left.

Our unique development Provizo Secure is a security system based on artificial intelligence. It detects suspicious activity in a few seconds and report it immediately.

Provizo Secure is a guarantee of parcel safety, which directly affects the loyalty of end users and inspires confidence in the brand.

The image shows a modern building facade with a series of teal-colored panels featuring a white leaf and floral pattern. The word "allegro" is printed in white on one of the panels. To the left, a wooden trellis is covered in green ivy. Above the teal panels, a balcony with a dark metal railing is visible, displaying a photograph of a smiling child. The building is situated in an urban environment with other buildings and greenery in the background. The ground in the foreground is covered with light-colored gravel, and there are some small plants and shrubs.
